

EVA Air's Environmental and Energy Policy

August 12, 2025

EVA Air recognizes the growing challenges posed by climate change and the global transition toward net-zero emissions. In alignment with societal expectations and international trends, the company has formally committed to achieving net-zero carbon emissions by 2050. This commitment reflects EVA Air's strong sense of climate responsibility and its ongoing efforts to engage in dialogue and collaboration with external stakeholders.

EVA Air's Environmental Committee serves as the highest decision-making and management body for the company's environmental and energy affairs. It ensures clear accountability, oversees the establishment of targets and objectives, drives the implementation of related initiatives, and monitors performance—with the overarching goal of minimizing environmental impact. This policy is implemented across all global operations, products, services, energy use, and waste management. It also extends throughout the upstream and downstream value chain, including suppliers, joint ventures, transportation, warehousing, and other business partners. Furthermore, it applies during mergers, acquisitions, and due diligence processes.

To realize our company's environmental and energy vision of "Reaching for the sky with energy savings, pursuing efficiency, and becoming a leader in environmental protection," we are committed to full compliance with domestic and international environmental regulations through the implementation of the ISO 14001 Environmental Management System and ISO 50001 Energy Management System. We place strong emphasis on ecological conservation, biodiversity, and zero deforestation. Moreover, we expect all employees to consistently practice energy saving, carbon reduction, and environmental protection in their daily work. Together with our passengers, we strive to protect our planet and become a model green enterprise. We promise to:

- **Firmly abide by environmental and energy regulations; promote concepts of environmental protection and energy saving**
- **Continuously improve environmental and energy performance; reduce impacts on our natural environment**
- **Practice green procurement; create a low-carbon circular economy**
- **Improve service and resource performance; create green brand value**

To address environmental concerns, we have established comprehensive communication channels to engage with stakeholders. We also implement environmental and energy training, so that all employees can fully understand how their work and company operations as a whole affect the environment; through such training, we inspire them to see through

all the specific practices that environmental protection and energy management require. By fulfilling our obligations as a Global Citizen, we aim to continuously enhance our environmental and energy management performance and lay a solid foundation for the company's sustainable development.

Clay Sun, President
EVA Airways Corporation
